This search was run on the machines which identify as Compugen1, abss03, abss04, or abss05. The databases on these machines are exactly the same as those on the other machines. However, for searches run on the listed machines, two sets of results are now generated when the Pending Nucleic Acid and/or Pending Amino Acid databases are searched. The Pending databases have been split into two parts to reduce the amount of time required for their daily update.

Searches run against the Nucleic Acid Pending database will produce two sets of results, with the extensions **.rnpn** and **.rnpn**

Searches run against the Amino Acid Pending database will produce two sets of results, with the extensions **.rapn** and **.rapn**

Because they contain data that is confidential, the results of Pending database searches should not be left in the case.
